

AI TALKING POINTS CARD

1. Groq

Groq is an AI inference platform used to run large language models very fast.

In this project, Groq is used to generate AI responses for compliance-related tasks.

2. RAG (Retrieval-Augmented Generation)

RAG combines stored knowledge with AI-generated responses.

The system first retrieves relevant data from ChromaDB and then sends it to the AI model for better answers.

3. ChromaDB

ChromaDB is a vector database used to store embeddings and semantic data.

It helps the AI search and retrieve related compliance information efficiently.

4. Prompt Engineering

Prompt engineering means designing clear instructions for the AI model.

Better prompts improve response quality, accuracy, and consistency.
